Abstracts

CIGS stands for copper indium gallium selenide, it is a thin film solar cell that is used to convert sun rays into electrical energy. CIGS thin film solar cells are manufactured by the process of depositing a thin layer of indium, copper, selenide and gallium on plastic backing or glass, having electrodes on the back and front to collect current. CIGS has a high absorption coefficient and absorbs sunlight strongly, so a thin film of this material is required to obtain the same electric energy as that of semiconductor materials.
