Abstracts

Circulating tumor cells are significantly useful in determining the status of disease progression rate and projection of therapy needed for tumor eradication. Further development of various tumor markers that can be used along with companion diagnostics to diagnose or monitor various forms of cancer are expected to boost usage rates of CTC tests in the coming years. Circulating tumor cell detection test possesses the ability to detect, quantify, and analyze tumor cells in the blood of cancer patients. It includes enrichment, detection and analysis of the detected circulating tumor cells. Circulating tumor cells tests are applicable in the characterization of tumor cells through biochemical marker analysis.
