## **Abstracts**

Cleansing oils are used to remove makeup, surface debris, and excess oil. What makes them different is how they work compared to traditional water-soluble cleansers that have a cream, gel, or foaming texture.

Traditional cleansers cleanse primarily with surfactants, ingredients that interact with oil, makeup, and surface debris on skin in a manner that allows them to be rinsed with water. Well-formulated cleansers also deposit hydrating ingredients on skin so it feels smooth and soft rather than tight or dry.

Many cleansing oils also contain surfactants, but the surfactants are not the stars of the show; rather, the oils take center stage.

The Cleansing Oil market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
