Abstracts

A cloud-based VDI solution is a computing model where an end-user's system can access all the essential files and data virtually in spite of being separated from the physical IT infrastructure. The computing model uses a cloud-based storage space wherein the system data and applications gets stored in the data centre of a primary cloud service provider where the end-users can access the data through login credentials. The VDI layer acts as an intermediary between backend and end-user application. It controls the transfer of data and execution of applications.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Cloud-Based VDI market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.

In a nutshell, this report is a must-read for industry players, investors, researchers, consultants, business strategists, and all those who have any kind of stake or are planning to foray into the market in any manner.
