Abstracts

A cloud-based VDI solution is a computing model where an end-user's system can access all the essential files and data virtually in spite of being separated from the physical IT infrastructure. The computing model uses a cloud-based storage space wherein the system data and applications gets stored in the data centre of a primary cloud service provider where the end-users can access the data through login credentials. The VDI layer acts as an intermediary between backend and end-user application. It controls the transfer of data and execution of applications.

Based on the Cloud-Based VDI market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
