Abstracts

Cloud computing is a concept developed on the basis of distributed processing parallel processing and grid computing. Its working principle can be understood as the automatic splitting of huge computing processing programs into numerous smaller subroutines through the network. These subroutines are handed over to a system consisting of multiple servers for searching, calculation and analysis, and finally the processed results are passed back to the user.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Cloud Computing in Government market covering all its essential aspects.
