Abstracts

Coagulation-hemostasis instruments or micro coagulant system is a device which is used to measure and evaluate the speed of the clot formation or blood coagulation. The device helps in preventing the chances of heart attacks, thrombosis and embolism by detection of blood clots in the blood vessels. Coagulation-hemostasis Analyzer is also used for measuring the coagulation pathway speed of thromboplastin levels in a few minutes. The method works on the principle of optical detection method by detecting turbidity during the blood coagulation and change caused in intensity of light that is scattered. The coagulation-hemostasis analyzer is built up in quality control and security lockout protocols for safe and secure use, as it is a device that is used to obtain sensitive information about the health of a patient. These analyzers are very much helpful in examining the hemostasis system in laboratories.
