## Abstracts

Coal is an essential fuel utilized globally to generate electricity, while petroleum fuels are commonly utilized in vehicles. Moreover, coal and petroleum fuels majorly possess carbon (carbon-carbon bond (C-C)) hydrocarbons), which makes the conversion of coal to liquid fuel more feasible. The production of liquid fuel from coal is also known as coal-to-liquid (CTL) technology or coal liquefaction, either by direct or indirect liquefaction. In this procedure, coal is dissolved in a solvent at high temperature and pressure, followed by hydrogenation to produce a high-grade, clean fuel suitable for use in transport. Moreover, the obtained liquid fuel tends to be ultra-clean, sulfur-free, low in particulates, causes low CO<sub>2</sub>, oxides, and nitrogen emissions through Carbon Capture and Storage (CCS).

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Coal To Liquid Fuel market covering all its essential aspects.
