## Abstracts

Coal is an essential fuel utilized globally to generate electricity, while petroleum fuels are commonly utilized in vehicles. Moreover, coal and petroleum fuels majorly possess carbon (carbon-carbon bond (C-C)) hydrocarbons), which makes the conversion of coal to liquid fuel more feasible. The production of liquid fuel from coal is also known as coal-to-liquid (CTL) technology or coal liquefaction, either by direct or indirect liquefaction. In this procedure, coal is dissolved in a solvent at high temperature and pressure, followed by hydrogenation to produce a high-grade, clean fuel suitable for use in transport. Moreover, the obtained liquid fuel tends to be ultra-clean, sulfur-free, low in particulates, causes low CO<sub>2</sub>, oxides, and nitrogen emissions through Carbon Capture and Storage (CCS).

Based on the Coal To Liquid Fuel market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
