Abstracts

The primary use of polyurethanes in footwear is to attach the sole to the rest of the shoe. Polyurethanes adhesives are well suited for this use since they provide a very strong bond, that can make the shoes last longer. In addition, polyurethanes are often molded into various parts of the shoe or boot, such as the outsole (the part that touches the ground) and the midsole (the layer between the outsole and insole that provides shock absorption). They can also be used for foam inserts, air-bags and gels for extra midsole comfort and support. In addition, PU coatings and sealants are sometimes used to improve scratch resistance, color retention and durability.

Based on the Colored Polyurethane Foams in Footwear market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
