Abstracts

An electronic flight bag is an electronic information management device that helps flight crews perform flight management tasks more easily and efficiently with less paper. It is a general purpose computing platform intended to reduce, or replace, paper-based reference material often found in the pilot's carry-on flight bag, including the aircraft operating manual, flight-crew operating manual, and navigational charts. In addition, the EFB can host purpose-built software applications to automate other functions normally conducted by hand, such as performance take-off calculations.
