Abstracts

Induction cooking is different from any traditional cooking technique. The product is directly heated by magnetic force; when a magnetic field is generated when the iron-based pot is placed on the cooking zone, a high-frequency alternating current flows through the copper coil under the glass-ceramic plate, and then the heat is directly transferred to the contents of the disk. Since the induction heating is transferred directly to the pot, a very rapid temperature rise can be achieved.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Commercial Induction Cooker market covering all its essential aspects.
