Computer Aided Design refers to the process of using computer software to create and simulate physical design, showing the appearance, structure, color, texture and other characteristics of newly developed products. Electrical Computer Aided Design (ECAD) software is used to create and modify both diagrams and layouts, including both 2D and 3D, in order to design, assess and document electrical Printed Circuit Boards (PCB). Designs from ECAD software are often interchanged with Mechanical Computer Aided Design (MCAD) software to generate a 3D model of the PCB.
