## **Abstracts**

Computer Aided Design refers to the process of using computer software to create and simulate physical design, showing the appearance, structure, color, texture and other characteristics of newly developed products. Electrical Computer Aided Design (ECAD) software is used to create and modify both diagrams and layouts, including both 2D and 3D, in order to design, assess and document electrical Printed Circuit Boards (PCB). Designs from ECAD software are often interchanged with Mechanical Computer Aided Design (MCAD) software to generate a 3D model of the PCB.

Based on the Computer-aided Design in Electrical and Electronics market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
