In engineering and product design, computers can help designers with computing, information storage, and mapping. In the design, a large number of calculations, analysis and comparisons of different schemes are usually carried out by computer to determine the optimal scheme; various design information, whether digital, text or graphic, can be stored in the memory or outside of the computer. Save and quickly retrieve; designers usually start with a sketch, and the heavy work of turning a sketch into a worksheet can be done by the computer; the design results automatically generated by the computer can be quickly displayed graphically, allowing the designer Make judgments and modifications to the design in time; use the computer to perform graphic data processing related to editing, enlargement, reduction, translation, and rotation of graphics, and software with these functions is called computer-aided design software.
