## Abstracts

Condensed Aerosol Fire Extinguishers are particle-based fire extinguishers that use very fine solid particles as well as gaseous substances. When the aerosol is ignited by electricity or heat, a mixture of combustion by-products and gases are produced, which mix together to form a homogeneous fire-extinguishing aerosol, which is then released into the protected area. Hot aerosols propel themselves through a unique solid chemical coolant that decomposes and absorbs a lot of heat, ensuring flameless emissions and even distribution of cold aerosols in the area, even to the most concealed and shielded locations, helping to prevent the fire reignited. So as to achieve the purpose of effective fire extinguishing.
