Abstracts

Fluorescent microscopy not only makes our images look good, but it also allows us to gain a better understanding of cells, structures, and tissue. With confocal laser scanning microscopy (CLSM) we can find out even more.

CLSM combines high-resolution optical imaging with depth selectivity which allows us to do optical sectioning. This means that we can view visual sections of tiny structures that would be difficult to physically section (e.g. embryos) and construct 3-D structures from the obtained images.
