Abstracts

Congestive heart failure is a chronic and progressive condition that affects the pumping capacity of heart muscles and also referred as “heart failure”. Congestive heart failure can refer to the stage in which fluid builds up around the heart and causes it to pump inefficiently. Ventricles pump blood to your body’s organs and tissues, and the atria receive blood from your body as it circulates back from the rest of your body.

Congestive heart failure develops when ventricles unable to pump sufficient volume of blood to the body. Eventually, blood and other fluids can back up inside your lungs, liver, abdomen, and lower body. There are two types of congestive heart failure, they are systolic heart failure and diastolic heart failure.
