## Abstracts

LED lights require a driver to provide and properly deliver the desired output. The internal or external combination depends on the type of LED bulb. The constant voltage driver is specified for a single direct current (DC) output voltage, typically 12 VDC or 24 VDC. LED lamps rated for constant voltage require a certain amount of output voltage to ensure proper operation. The driver receives a standard voltage of approximately 120-277 volts, usually found in residential outlets (sockets).
