Abstracts

A Slip Ring is an electromechanical device that allows the transmission of power and electrical signals from a stationary to a rotating structure. Also called a rotary electrical joint, collector or electric swivel, a Slip Ring can be used in any electromechanical system that requires unrestrained, intermittent or continuous rotation while transmitting power and / or data. It can improve mechanical performance, simplify system operation and eliminate damage-prone wires dangling from movable joints.

Contactless sliprings based on inductive power transfer (IPT) are a preferable alternative to mechanical sliding contacts for power transfer in rotary applications.
