Abstracts

Container screening is a process of inspecting cargo containers for the purpose of identifying and removing potential security threats before they reach their intended destination. Container screening system/device is a measurement system used for real-time inspection of sealed-container, and content (liquid/material) classification and discrimination. There are various technologies utilized for closed container screening such as gamma imaging, X-ray imaging and radiation detection. Container screening helps to identify containers with high-risk, pre-screen and evaluate containers before they are shipped, and also it ensures that screening can be done rapidly without slowing down the movement of trade.
