Abstracts

The control room console refers to the furniture, desk, or workstation found in mission-critical command centers. Operators work from their console to control and monitor operational activities. The nature of control room operations means that consoles differ from standard office desks. They need to withstand 24/7 use and integrate customized IT equipment. A control room console will often support multiple PCs with large monitors in a tiered arrangement. This means that technology integrations must include monitor arms capable of multiple tiered monitors, enhanced cable management and ventilation systems along with extra power and data outlets. Control room consoles are commonly used in emergency call centers, security, process control, energy and utilities, transportation, and the military.
