Abstracts

The conveyor belt is an endless belt that transfers material that is transferred between two points. The conveyor belt consists of a reinforcing member or a carcass and a protective covering. The conveyor belt is typically a composite of rubber or some elastomer (such as PVC and fabric) or some other reinforcement. Elastomers are external coverings that provide wear and protection to the operating environment. The interior of the fabric carcass acts as a strength bearing member for supporting the load and controlling the stretching of the belt.
