## Abstracts

The core material is normally low strength material, but its higher thickness provides the sandwich composite with high bending stiffness with overall low density. Core materials are generally used for 'sandwich structured' composites which is a special class of composite materials that is fabricated by attaching two thin, but stiff skins to a lightweight, but thick core.

Based on the Core Material market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
