Abstracts

Corrosion monitoring is a process and activity of monitoring critical components involved in industries, concert structures, factories, workshops and plants such as machines, materials, rails, tunnels, assets for any signs or presence of corrosion in them. It is important to identify the location, causes, and degree of corrosion so that operations are continued and reliable. Corrosion monitoring can identify any non-conforming in any alloy components, which are susceptible and lead to corrosion, causing catastrophic failure for normal operations. It gives significant advantages for safety measures and preventative maintenance. Corrosion monitoring helps in taking the informed decisions regarding remaining life of corrosion objects, strategies to extend the life of material and its selections.

The Corrosion Monitoring market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
