## Abstracts

Corrosion monitoring is a process and activity of monitoring critical components involved in industries, concert structures, factories, workshops and plants such as machines, materials, rails, tunnels, assets for any signs or presence of corrosion in them. It is important to identify the location, causes, and degree of corrosion so that operations are continued and reliable. Corrosion monitoring can identify any non-conforming in any alloy components, which are susceptible and lead to corrosion, causing catastrophic failure for normal operations. It gives significant advantages for safety measures and preventative maintenance. Corrosion monitoring helps in taking the informed decisions regarding remaining life of corrosion objects, strategies to extend the life of material and its selections.

Based on the Corrosion Monitoring market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
