Abstracts

Resin is highly viscous or solid substance which can be natural or of synthetic origin. Corrosion resistance resins are mainly formulated as isophthalic, vinyl ester, and terephthalic resins to impart desired property of corrosion resistance. They have application in oil & gas, automotive, and marine industries. However, corrosion is a major challenge faced by manufacturers operating in these industries, as it leads to high monetary and property losses across the aforementioned industries. Corrosion resistant resins are gaining traction in these industries, owing to their properties such as resistance to solvents, chemicals, moisture, and high temperature. They have a wide range of application in manufacturing of glass containers, stainless steel, and painted steel.

Based on the Corrosion-Resistant Resin market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To boost growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
