Abstracts

Thickeners are often used in a variety of cosmetics. They enhance the consistency, volume and viscosity of the cosmetic to provide greater stability and better performance. While some thickeners also have emulsification or gelling properties, most thickeners have the effect of retaining water on the skin and thus acting as a humectant.

Thickeners may be completely natural, such as waxes, but may also be synthetic or semi-synthetic. They are derived from a variety of sources and are composed of very different molecular structures, including polysaccharides, proteins, alcohols, silicones or waxes.
