Abstracts

In general, a person's credit report contains accurate information. Some information expires after a specified amount of time. Negative data can stay in a person's credit history for up to seven years. Information about bankruptcies remains for ten years. A credit repair company cannot remove these records or establish a new credit identity for an individual.

Consumers should follow procedures established by credit reporting companies and may desire to hire an attorney, or do it themselves when attempting to change credit records. A credit repair service (or consumers themselves) can research records for errors in billing or credit reporting to clear or delete incorrect information and repair credit in that manner but neither can remove negative data from the file if it is accurate.

Based on the Credit Repair Services market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for

marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
