Abstracts

Cryogenic Control Valve is a regulating valve used in low temperature and cryogenic applications. The long-neck bonnet is insulated and equipped with a multi-spring actuator, which has the advantages of compact overall structure, light weight and good stability. The valve body is made of precision cast angle structure, the material is aluminum alloy, and has good low temperature resistance. The bellows seal ensures that the regulator valve does not leak at low temperatures. Therefore, it is widely used in low temperature and deep cooling applications such as metallurgy, air separation, oxygen production, petroleum, and chemical industry.
