## **Abstracts**

CT can measure the X-ray and the transmittance according to different tissues of the human body. The instrument with high sensitivity is used to measure the human body, and then the data obtained by the measurement is input into the computer. After the computer processes the data, the CT is processed. The machine can take a cross-sectional or three-dimensional image of the examined part of the human body and find small lesions in any part of the body.
