## Abstracts

CVD is a widely used material processing technology. The technology for CVD of pure diamond coatings on rotating cutting tools has developed rapidly in the past several years. In recent times, several advanced composite materials, for example, carbon fiber reinforced plastics (CFRP) parts that are gaining popularity are perfectly suited to be machined with CVD diamond tooling. This has spurred the growth of the CVD diamond coating technology.

PVD or Physical Vapor Deposition, is a process which vaporizes a number of metals, and then binds it on a surface, in layers, in a heated vacuum.

Based on the CVD and PVD Coating Diamond market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
