## Abstracts

Cycling Apparel can help you ride longer and feel stronger. There are many benefits of them. Cycling Apparel is cut to fit properly when you're leaning forward over the handlebars. That means shirts and jackets have a longer back to keep your lower back covered, and legwear has a higher waist at the back too. To stop your wrists being exposed, sleeves are a bit longer on long-sleeved shirts and jackets, and legwear is shaped with a bends at the waist and in the knee so doesn't impede pedalling. Cycling Apparel moves with you as you ride. That's especially important for legwear, because your legs are the part of you that moves most. That's the reason why cycling shorts are made from Lycra fabric, because it has enough built-in stretch that it doesn't bunch up and chafe. Ride up a steep hill in a cotton t-shirt under a waterproof jacket and you quickly discover why cycling clothing isn't made from cotton. You sweat, the sweat soaks the shirt and you get wet, and then cold. Cycling gear is made from fabrics through which water can move away from your skin and evaporate, a phenomenon usually referred to as 'wicking' by analogy with the way wax moves up a candle wick.
