## Abstracts

A cycling jersey is a specialized jersey for cycling. While the vast majority of cyclists worldwide wear conventional clothing while riding, a jersey offers certain advantages for the sport-oriented cyclist. A cycling jersey is cut long in the back to accommodate the bent-over position used in sport-oriented cycling. Any pockets on the jersey are placed on the back panel as front pockets would tend to spill. The zipper is often made very long so that the cyclist can open up the jersey to allow for ventilation. The cycling jersey is usually worn with a tight fit in order to reduce air resistance. Jerseys are made from a material designed to wick moisture from the skin, keeping the cyclist cooler and more comfortable.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Cycling Jersey market covering all its essential aspects.
