Abstracts

A cycling jersey is a specialized jersey for cycling. While the vast majority of cyclists worldwide wear conventional clothing while riding, a jersey offers certain advantages for the sport-oriented cyclist. A cycling jersey is cut long in the back to accommodate the bent-over position used in sport-oriented cycling. Any pockets on the jersey are placed on the back panel as front pockets would tend to spill. The zipper is often made very long so that the cyclist can open up the jersey to allow for ventilation. The cycling jersey is usually worn with a tight fit in order to reduce air resistance. Jerseys are made from a material designed to wick moisture from the skin, keeping the cyclist cooler and more comfortable.

Based on the Cycling Jersey market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
