## Abstracts

Data Centers refers to virtual or physical infrastructures that are used by enterprises to store a large amount of mission-critical data. The data centers assist in storage, retrieval, and processing of this data. These data centers require multiple backs up supply units, networking connections, and cooling systems for running the enterprise's core applications. The data centers include a number of elements such as electrical switches, power distribution units, uninterruptible power supplies, ventilation, and provisions for network connectivity. Modern data centers make use of management and monitoring software that allows the IT administrators to oversee the equipment and monitor the facilities remotely.
