## Abstracts

Deodorizer or deodorant, substance used to absorb or eliminate offensive odors.

Disinfectants such as hydrogen peroxide, chlorine, and chlorine compounds eliminate odors caused by microorganisms. Adsorbent deodorizers such as activated charcoal and silica gel remove odorous molecules by attracting them to the adsorbent surface. Some substances, such as chlorophyll, eliminate odors by combining chemically with odorous impurities. Glycols, which are disinfectant as well as deodorizing substances, are sprayed into the air to absorb odors. In some industrial processes, odor-containing air is scrubbed, i.e., bubbled through a liquid that dissolves or emulsifies the odorous molecules. In personal hygiene, deodorants may be applied locally on body surfaces.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Deodorizer market covering all its essential aspects.
