Desalination of seawater uses desalination of seawater to produce fresh water. It is an open source incremental technology that realizes the utilization of water resources. It can increase the total amount of fresh water, and is not affected by time and space and climate. It can guarantee stable water supply for drinking water from coastal residents and water supply for industrial boilers. The process of obtaining fresh water from seawater is

desalination. The seawater desalination methods currently used include seawater freezing method, electrodialysis method, distillation method, reverse osmosis method, and

ammonium carbonate ion exchange method, and the current application of reverse osmosis membrane method and distillation method is the mainstream in the market.
