## Abstracts

Diamond is a diamond that has been honed. Diamond is a natural mineral and a rough stone. Simply put, diamonds are simple crystals of carbon formed in the deep high pressure and high temperature of the earth. Although human civilization has a history of thousands of years, people have discovered and initially understood diamonds for only a few hundred years, and the time to truly reveal the inner secrets of diamonds is shorter. Before that, it was only a mythical religious and fearful legend, and it was seen as a symbol of courage, power, status and honor. Today, diamonds are no longer mysterious, and they are not treasures that only the royal family can enjoy. It has become a popular gem that all people can own and wear. The culture of diamonds has a long history, and people regard it more as a symbol of love and loyalty.
