## Abstracts

Diaphragm pump (also known as membrane pump) is a type of positive displacement pump, which reciprocates diaphragm to move fluids, gas, and gas-liquid mixtures. These pumps also use a combination of reciprocating action and either a ball valve or a flapper valve to transfer the liquids. Diaphragm pumps are self-priming and are an ideal choice for transferring viscous fluids. These pumps can transfer liquids who have low, medium, and high viscosities. The key components of diaphragm pumps are air chamber, air distribution system, outer diaphragm plate, inner diaphragm plate, valve ball, valve seat, discharge manifold, liquid chamber, diaphragm, and suction manifold.
