Abstracts

Digital calipers are the latest in caliper technology and are considered as an evolution of Vernier calipers. Digital calipers are generally used to measure objects which cannot be measured with a ruler. They are made of stainless steel and contain plastic case for display. Digital calipers are measuring instruments which take differential measurements, and are commonly used for inspection in the manufacturing industry to provide precise measurements of an object. Measurement on digital calipers can be taken in both metric and imperial units, and readings can be switched between millimeters, centimeters, and inches. The reading and measurement is generated electronically and displayed on a digital and high resolution screen as a single value. Calipers are used in various fields, such as, mechanical engineering, inspection, engineering design, metalworking, science, and manufacturing, among others. The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Digital Caliper market covering all its essential aspects.
