## Abstracts

The code copying machine refers to first photoelectrically converting an optical analog image signal of an original produced by exposure and scanning by a CCD (Charge Coupled Device) sensor, and then inputting a digitally processed image signal to a laser modulator, the modulated laser light. The bundle scans the charged photosensitive drum, produces a static latent image of a certain composition on the photosensitive drum, and then undergoes steps of development, transfer, fixing, etc. to complete the copying process.
