Abstracts

Digital manufacturing is an integrated manufacturing method centered on computer systems. As the number and quality of computer systems in manufacturing plants increase, the transition to digital manufacturing is becoming more common. As more and more automated tools are used in manufacturing plants, it is necessary to model, simulate and analyze all machines, tools and input materials to optimize the manufacturing process. In general, it can be seen that digital manufacturing has the same goals as Computer Integrated Manufacturing (CIM), Flexible Manufacturing, Lean Manufacturing, and Design for Manufacturability (DFM). The main difference is that digital manufacturing is developed for the computerized world.
