Abstracts

A digital duplicator, also known as a printer-duplicator, is a printing technology designed for high-volume print jobs (20 copies or more). Unlike copiers and laser printers, the Digital Duplicator applies the same method as the stencil duplicators which create images on the paper with ink, by making ink penetrate through the pore created onto the master. However, the Digital Duplicator masters are no longer a cloth-like material covered with wax which is used in the stencil duplicators. With the advance of material technologies, special masters which provide finer penetration of ink have been developed. The ink has also been specially developed for the Digital Duplicator in order to realize high image quality.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Digital Stencil Duplicator market covering all its essential aspects.
