Abstracts

A digital duplicator, also known as a printer-duplicator, is a printing technology designed for high-volume print jobs (20 copies or more). Unlike copiers and laser printers, the Digital Duplicator applies the same method as the stencil duplicators which create images on the paper with ink, by making ink penetrate through the pore created onto the master. However, the Digital Duplicator masters are no longer a cloth-like material covered with wax which is used in the stencil duplicators. With the advance of material technologies, special masters which provide finer penetration of ink have been developed. The ink has also been specially developed for the Digital Duplicator in order to realize high image quality.

Based on the Digital Stencil Duplicator market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
