## Abstracts

DIN Rail IPCs are industrial PCs that can be mounted on DIN rails. A DIN Rail is a common piece of mounting hardware for industrial equipment that uses a fixed-size metal bar to hang equipment off of. This is common in the industrial space. Industrial PC is defined as a computing platform developed to work in extreme environments like high-temperature fluctuation, moisture, humidity, and heavy dust. These industrial PCs are just like desktop PCs that are utilized for storage, processing, and communications, and provide a flexible interface to the personal and commercial environment. In comparison to other PCs, industrial PCs are more efficient, reliable, costly, and consume less power, as well as have a long service life.

Some organizations use DIN rail mountable computers for PC-based control systems for industrial automation and control applications. PC-based control systems replace proprietary controllers, such as PLCs because they can consolidate several systems onto a single system. The main benefit that DIN rail PCs offer is the ease of integration into existing systems, thanks to the ease of installation inside control cabinets. Furthermore, DIN-rail embedded PCs are often used to serve as communication and visualization gateways for monitoring plant operations, agriculture monitoring, vehicle tracking and management, and other applications.
