## Abstracts

Direct drive wind turbines, also known as gearless wind turbines, are wind turbines without a gearbox. The rotor shaft is directly connected to a synchronous or permanent magnet generator for power generation. Direct drive wind turbines usually use either permanent-magnet excited direct drive generator system or electrically excited direct drive synchronous generator system depending upon cost, location, and other constraints. Direct drive wind turbines are better alternatives for offshore applications, as they require less preventive and break down maintenance vis-?-vis geared wind turbines.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Direct Drive Wind Turbines market covering all its essential aspects.
