## Abstracts

Distributed wind is defined by the wind project's location relative to end-use and power distribution infrastructure, rather than turbine or project size. Distributed wind includes the following:

wind energy systems, either off-grid<sup>1</sup> or grid-connected, at homes, farms and ranches, businesses, public and industrial facilities, or other sites to offset all or a portion of the local

energy consumption at or near those locations.

systems connected directly to the local grid<sup>2</sup> to support grid operations and local loads.
