## Abstracts

Distributed wind is defined by the wind project's location relative to end-use and power distribution infrastructure, rather than turbine or project size. Distributed wind includes the following:

wind energy systems, either off-grid<sup>1</sup> or grid-connected, at homes, farms and ranches, businesses, public and industrial facilities, or other sites to offset all or a portion of the local

energy consumption at or near those locations.

systems connected directly to the local grid<sup>2</sup> to support grid operations and local loads.

Based on the Distributed Wind market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
