Abstracts

Drying vegetables is one of the oldest techniques used to preserve vegetables for a long time. Its principle of drying and preservation is to reduce the moisture content from fresh vegetables to a level where microorganisms such as bacteria, mold, and yeast are unable to grow and spoil the vegetable. With the application of modern technology, dried vegetables have better flavor, color, aroma, acceptability, and rehydration. High quality dried vegetables have less than 10% moisture content, the absence of defects, and fast rehydration ability. Commonly available dried vegetables are carrots, tomatoes, potatoes, mushrooms, peas, and others.
